SUMMARY

I am a person who is challenged by new things. That really supports me as a software engineer. Starting from wordpress developer until now to be a full-stack developer. But I usually dabble in the backend a lot more. I've had a lot of experience in making projects both from the office and as a freelancer.

EXPERIENCE

Vortex Store | Freelancer Web Developer
2017 – present

I started a small business before I went to college. The business is called the Vortex Store, which is a web creation service. Initially I created a web using wordpress, but over time I started using frameworks like Codeigniter, laravel, and even flutter.

PT. Len Industri (Persero) | Web Developer (Internship)
September 2019 – January 2020

When I was in college, I had the opportunity to do an internship at a state-owned company called PT. Len Industri (Persero). There I was assigned to develop a system that is useful for managing student data or students doing internships there. The system is called SI-PRAKERIN. The system was created using the PHP programming language and the Codeigniter framework. I developed several features for printing participant cards and fixing the remaining bugs.

PT. Len Industri (Persero) | Site Manager
October 2020 – December 2020

Before I graduated, I applied again to the company where I had an internship. And I was accepted as a site manager to be assigned to a city called Ketapang which is located in the province of West Kalimantan. There I took care of a project from the Ministry of Energy and Mineral Resources, namely the electric street lighting project. I coordinated with the local government to ask for a location survey permit, location data collection, and installation of electric street lighting.

PT. Lapi Divusi | Fullstack Developer
December 2020 - present

PT. Lapi Divusi is a technology company engaged in services and consulting. I work in the Critical Information System. Here I am developing a web project and a mobile application. Starting from developing the frontend, the backend also develops the REST API as a tool for system communication. One of the projects that I have developed is an information system for new student admissions from Parahyangan University.

PROJECT OVERVIEW

PTU Web Contractor
2017

create a landing page for a contracting company located in the Karawang area. This website uses wordpress.

Jepara Furniture Web
2017

In the same year I got a landing page project also to display furniture products in the Jepara area.

Cibeusi Tourism Web
2018

Cibeusi pariwasata web is a web to market tourism and culture in Cibeusi village, Subang, West Java. This web is also a medium for ticket sales for Cibeusi tourism which was built using the Codeigniter 3 framework. This website was created in the framework of village grants with the Subang State

polytechnic.

PT Guna Cahaya Teknik
2019

I got a project from my lecturer, which is to create a company landing page using wordpress. In addition, I also take care of SEO on the web so that it is easier for the google search engine to recognize.

Linumuda
2019

Linimuda is a community website. In addition, the timeline is also a web media for information about life, finance and even careers. This website is made using wordpress.

BDR Polsub
2020

In early 2020 when the pandemic began to enter Indonesia, it prompted various agencies to work from home. This makes one of the integrated service units on my campus to create an attendance system and monitoring for lecturers and staff on my campus. I got an offer to contribute to the system. This system is built using codeigniter framework and mysql database.
